

Hamilton has been a true pioneer since its foundation in 1892 in Lancaster, Pennsylvania, USA. Very early in its history Hamilton established itself as the ultimate provider of accurate timekeeping. Its first series of pocket watches became known as the “Watch of Railroad Accuracy”. Later the company gained the prestigious rank of supplier to the US Armed Forces. In 1957 the world’s first electric watch appeared and it was a Hamilton: the Ventura! Elvis Presley was one of the first fans who chose this watch. Since over fifty years the Ventura has been a best seller. The Hamilton Pulsar, the world’s first LED digital watch started measuring time in 1970. In 1974 Hamilton became a member of the Swatch Group (previously SSIH), the largest watch manufacturer and distributor in the world. It was only in 2003 that Hamilton transferred its headquarters from the United States to Switzerland. Since then all Hamilton watches are manufactured in Switzerland and enjoy the Swiss Made Label.

In 1892 the Hamilton Watch Company set out to deliver accurate watches to the railroad community. By the beginning of the twentieth century, Hamilton had earned the title of "The Watch of Railroad Accuracy".

During World War II, Hamilton stops production of watches for consumers to concentrate on the huge task of providing the forces. The company's efforts are rewarded in 1943 with a US Army-Navy "E" Award, presented for its excellence in production of military equipment.

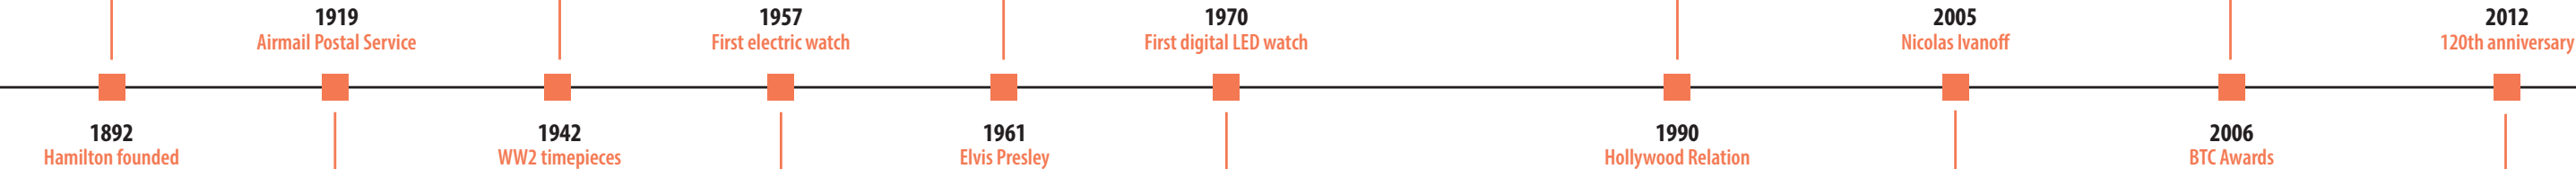

In 1961 Elvis Presley wears his Ventura in the film "Blue Hawaii". Hot on Presley's footsteps is Stanley Kubrick who approaches the American brand in 1966 to make unique timepieces for his new, futuristic film, 2001: A Space Odyssey. The Hamilton design team provides him with a wristwatch and a desk clock that fit the bill perfectly.

The special Hamilton/Hollywood relationship continues with roles in such films as Men in Black, Lethal Weapon 4, Fight Club, Independence Day, The Talented Mr. Ripley, Jack Ryan, Die Hard and You've Got Mail. In 2006 Hamilton creates the Hamilton Behind the Camera Awards to honor the key talents working behind the scenes. For over six decades the brand closely collaborates with filmmakers, costume designers and prop masters.

Timeline

1919 a Hamilton aeronautical watch accompanied the very first American airmail postal service between Washington and New York.

Hamilton introduces the world's first electric watch: the Ventura, revolutionary technology in a revolutionary design.

The world's first LED digital watch starts measuring time. Made by Hamilton.

Hamilton joins leading aerobatic pilot, Nicolas Ivanoff in the cockpit - since then Hamilton is strongly involved in aerobatics and key airshows: Oshkosh, Free Flight World Masters Tour, Swiss aerobatic association. As an official Hamilton ambassador Nicolas Ivanoff is taking to the skies in a Hamilton-branded Edge 540.

In 2012, precisely 120 years later its birth, Hamilton's innovative Swiss made products are still making their mark on the passage of time, with style and sophistication as their signatures.

The Hamilton passion for craftsmanship and design is exemplifying in the launch of four new exclusive movements: The H-10, H-30 and H-40 with a typical power reserve of 80 hours and the H-22, with the great esthetic effect of the small second counter at eight o'clock.

TODAY

Exclusive Movements

The Hamilton passion for harmoniously marrying craftsmanship and design is deep-rooted and far-reaching. Exemplifying this approach are four exclusive new automatic movements, the H-10, H-30, H-40 and H-22, completing the collection of the H-31, H-21 and H-12.

In H-10, H-30 and H-40, the entire kinematic chain has been refined from the barrel to the escapement, to increase the typical power reserve to 80 hours and assure optimal reliability and accuracy, in particular through the suppression of the escapement regulator. The new rotor, largely skeletonized, adds the finishing touch. With an increased typical power reserve of 60 hours, the H-31 and H-21 are based on ETA 7753 and 7750 chronograph Valjoux movements.

The Hamilton H-20-S is an exclusive skeleton movement. Contemporary decoration, ranging from brushed, skeletonized rotors to an intricate 'H'-pattern on individual elements add a sense of theater to traditional precision timekeeping. Opening creative ways of presenting the passage of time are the H-22, with the off-center positioning of the small second counter at eight o'clock and the H-12, creating asymmetric appeal in the off-center positioning of the hour and second hands.

KHAKI AVIATION

Hamilton is taking Khaki Aviation watches to new heights by the close cooperation with leading air squadrons and world famous aerobatic pilot Nicolas Ivanoff. Sharing Hamilton's belief that sky is the limit, everyone's dedication is put into aviation features that combine outstanding design and functionality.

Inspired by Hamilton's heritage of Air Force watches, this chronograph is unique in its asymmetrical design: its case offers an oversized crown and pusher protector, while its dial shows a unique face with 2 counters at 10h and 6h. The textile strap perfectly completes this tribute to the pioneering times of aviation.

Khaki Navy

The Khaki Navy line finds its roots in Hamilton's close collaboration with the American Navy, for which the brand developed veritable navigational tools during WWII. In particular the Hamilton Marine Chronometer and a special diving watch for the underwater teams known as "frog-men". Reflecting latest technologies and modern design in water resistance up to 100 bar, unidirectional bezel, rubber strap and unique rubber details, the Khaki Navy watches are perfectly equipped for their underwater experiences.
