Catalogue No. 34

1907-1908

1836

Preface

1907

IN this age of critical and discriminating tastes, the task of creating universally popular designs in any line of manufactured articles is not accomplished haphazard or by the "cut and try" method. On the other hand, the utmost familiarity with present trade conditions and requirements is absolutely essential, as well as the intuition to detect the popular trend toward certain types and thus anticipate popular demand. Our well-known success in producing universally popular and salable patterns in the past is the best guarantee for the future.

In this catalogue we have undertaken to illustrate a complete and comprehensive line of clocks, all popular and attractive designs and ready sellers. Many patterns shown in our former catalogue have been retained because of their deserved popularity and the large demand for them. A few, found to be slow sellers, have been dropped, while a number of new and up-to-date designs have been added, the whole comprising a variety of patterns, which for merit, attractiveness and selling qualities, are unsurpassed.

Since our former catalogue was issued, we have taken a long step forward in the manufacture of Nickel Alarms, and now offer a very complete line of these clocks. In the "ROTATOR," we believe we have reached the acme of excellence in design, quality and finish. Special attention is directed to the illustrations and description of this clock on pages 8 and 9.

The high quality of our enameled work is too well and favorably known to require comment. In this particular line of work, it seemed, we had practically reached perfection, but untiring efforts and intelligent, well-directed experiments, together with a new steam enameling plant just erected, have wrought improvement, and it is only fair to say that we are now farther in advance of our competitors in the art of enameling than ever before.

Our line of Mission Clocks were designed by a connoisseur in Mission art, and the finish is equal to the finest and most expensive Mission furniture work.

Special attention is called to the high character of the embossed work on our Kitchen Clocks, the result of artistic and practical designs, skillful die work and superior workmanship and finish. Our oak cases are varnished by immersion, thoroughly coating the case inside and out, thus making an extremely homogeneous and beautiful finish.

Windows App : Images To PDF Maker

A thorough testing and inspection system is rigidly maintained. Every movement is run and thoroughly tested before it leaves the factory, and, with proper usage, is warranted a correct timekeeper. The case of every clock, before packing, is critically examined for defects in workmanship and finish.

The reason INGRAHAM CLOCKS are better than other makes is not because they just happen to be so, but is the result of a combination of circumstances brought about by practically perfect organization and manufacturing conditions, to wit: proficiency and experience on the part of superintendents and workmen, the use of the best materials obtainable, the adoption of the best known methods and processes of manufacture that science and experience in the art of clock making have sanctioned, together with extreme care and attention to details at every stage of manufacture.

Our well-known policy of distributing our product strictly through the medium of the jobber will be continued. The positive advantage and protection thus secured to the jobber handling Ingraham Clocks is apparent. At the same time the benefits of this system to the retailer are quite as marked. Owing to our liberal jobbing discounts, the retailer enjoys every advantage in price, etc., that accrues from dealing direct with the manufacturer, and is assured much more prompt delivery at a minimum cost of transportation, on account of his proximity to the source of supply, the warehouse of every jobber being a local depot for the distribution of Ingraham Clocks.

THE E. INGRAHAM COMPANY.

All Enameled clocks packed singly.

All Oak and Walnut Mantel clocks packed six in a box.

All Kitchen, Hanging 8 in., 10 in., 12 in. Drop Octagon, 8 in., 10 in., 12 in. Ingot, Lyric, Lustre and Dew Drop clocks packed six in a box.

All other hanging clocks, packed singly.

When clocks are packed regularly six in a box, an additional charge of ten cents per clock is made for packing singly.

Kitchen Mantel, or Hanging clocks fitted with:

Gongs, 45 cents each additional, list.

Alarms, 45 cents each additional, list.

Calendar, 40 cents each additional, list.

Thermometer and Barometer, 55 cents each additional, list.

This clock is $6\frac{1}{2}$ inches in height, with $4\frac{1}{2}$ inch dial. Case of seamless drawn brass, nickered and highly polished. The movement is made of the best material obtainable for the purpose, and is constructed on scientific principles by the best methods and workmanship.

Every clock is thoroughly tested before it leaves the factory and is warranted a first class time-keeper. The alarm adjustment will be found practically perfect, and the alarm may be relied upon to "go off" at the time set.

This clock stands in the foremost rank of high grade Nickel Alarm Clocks.

Packed 50 clocks in a box, each clock in a separate paste-board box.

STANDARD

List price, per clock, \$1.60

This clock is 6½ inches in height, with 4½ inch dial. Case of seamless drawn brass, nickered and highly polished. It is fitted with the same high grade movement as used in the "STANDARD," with the necessary variations to encompass the Long Alarm feature, and is likewise tested and guaranteed.

This clock rings continuously for five minutes unless stopped, which may be done at any time by means of the manual "shut-off." The persistency of this alarm is warranted to arouse the soundest sleeper.

Packed 50 clocks in a box, each clock in a separate paste-board box.

LONG ALARM

List price, per clock, \$1.90

This clock is $6\frac{1}{2}$ inches in height, with $4\frac{1}{2}$ inch dial. Case of seamless drawn brass, nickered and highly polished. The movement is made of the same high grade material and workmanship as characterizes the "STANDARD" and is thoroughly tested and fully guaranteed.

The alarm rings for about a quarter of a minute, and is silent a similar period, alternating thus for about twelve minutes, but is fitted with a manual "shut-off" by means of which the alarm may be discontinued at will.

The "Alternator" is recommended to all, both light and sound sleepers, as positively the safest and surest guarantee of being aroused at the time desired. Many ultra-sound sleepers, after using the common, continuous alarm clock a short time, have found that the alarm awakes them momentarily only, and they again lapse into slumber, the alarm having failed of its purpose. The alternate noise and silence of the "Alternator" is so irritating in its effect and so persistent in keeping at it, that it never fails of its object.

Packed 50 clocks in a box, each clock in a separate paste-board box.

ALTERNATOR

List price, per clock, \$2.05

This clock is 7 inches in height, with 4½ inch dial. Case of seamless drawn brass, nickered and highly polished. It is fitted with the same high grade movement as used in the "Alternator," which is a guarantee of quality unsurpassed.

The alarm rings for about a quarter of a minute, and is silent a similar period, alternating thus for about twelve minutes, but is fitted with a manual "shut-off" by means of which the alarm may be discontinued at will.

All the advantages claimed for the alternating feature of the "Alternator" obtain in this clock in addition to which the alarm is very much louder on account of the extra large bell, which also gives the clock a very superior appearance.

Packed 50 clocks in a box, each clock in a separate paste-board box.

DI-ALTERNATOR

List price, per clock, \$2.20

This clock is 6 inches in height, with $4\frac{1}{2}$ inch dial. Case of seamless drawn brass, nicked and highly polished, with movement the same high grade used in all our Alarm Clocks.

The alarm rings about a quarter of a minute and is silent a similar period, alternating thus for about twelve minutes and provided with a manual stop by means of which the alarm may be discontinued at will.

ROTATOR

List Price, Per Clock, \$2.50

The bell is contained entirely within the case, being located between the dial and movement. The case is encircled with perforations to allow the sound to escape. To prevent the dust from getting into the movement through these perforations, a dust cap is located between the bell and movement, dividing the case into two compartments absolutely separated. The forward one is perforated and contains the bell, and the other is perfectly tight and dust proof, and contains the movement; all of which is clearly shown in interior view.

A bell arranged in this manner has many advantages over placing it on top of case, or at the back. Being wholly within the case, it cannot be muffled by coming in contact with any foreign object, nor can it be displaced or thrown out of adjustment by striking against something, as frequently happens when the bell is on top or back of case.

ROTATOR
(Interior View)

As the diameter of the bell is practically that of the interior of the case, it is in consequence much larger and noisier than any other bell on the market.

Packed 50 clocks in a box, each clock in a separate paste-board box.
