SHOWING the clock as put up in Banks, Stores, Offices and Private Residences, where the watchman has access only to a small button outside the building. When used in factories, etc., where the watchman is inside, the clocks are placed at various stations, and operated by pushing to one side the lever at the bottom of the clock.

MODE OF OPERATION—The small dial in the center is removed, and upon the flange is placed a bulletin (a paper ribbon), upon which are printed the hours. This ribbon is placed so that the hours printed upon it correspond with the figures on the small dial. This dial revolves with the hour hand, and when the lever is pulled it marks the ribbon, showing the exact time at which the watchman visited the station.

THE clock has a 30-hour lever movement, will run in any position, and is a good time-keeper.

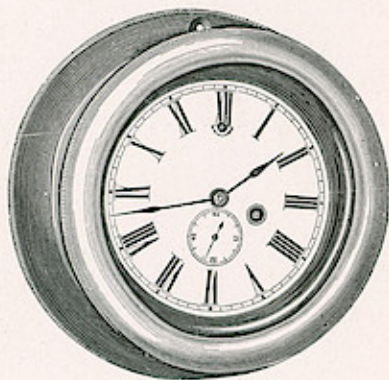

The case, inner dial and portions of the movement exposed to view are nickel plated and will not tarnish, and the clock case is so constructed that it is dust-proof. The application of power to the puncher-needle is positive, and there is no fail about it, and it cannot be tampered with without exposing the attempt. The interval between each report of the watchman is arranged to suit the pleasure of the proprietor. The clock will record each report distinctly, however short the interval may be.

One Day, Time. 6 inch Dial.

Price, \$15.10

CHRONOMETER LEVERS

One Day, Time.

We call attention to this Fine Lever Clock, specially designed for Locomotives, Steamers, or other situations where accurate timekeeping is required, and a pendulum clock cannot be used.

The movements are made in the best manner, with Cut Steel Pinions and Chronometer Balance, Jeweled, and fitted up with finely tempered Hair Springs.

They have a very simple and perfect regulator, which provides for the most accurate adjustment.

They are put up in three sizes of cast brass cases, with porcelain dials.

Nos. 5003 and 5004 have snap bezels. The front of 5006 is screwed on, and the winding is at the side of case. No. 5006 is dust-proof.

These clocks are warranted accurate timekeepers.

Diameter of No. 5003 at front, 5½ inches; at back, 6½ inches. 3½ inch Dial. Price, \$37.50

Diameter of No. 5004 at front, 6½ inches; at back, 7½ inches. 4½ inch Dial. Price, 38.80

REGULATORS Nos. 10, 12, 14 and 15

Are intended for Watchmakers and Jewelers and for Standard time at important railroad stations.

The movements of Nos. 12 and 15 are independent seconds. Frames solid; Damasked finish; pinions solid cast steel, hardened, Graham escapement, jeweled. Size of frame, 7x9 inches.

Nos. 10 and 14.—Center sweep second. Size of frame 6 1/2 x 7 inches. Same finish as Nos. 12 and 15; same escapement and same pinions.

Dials are engraved, filled, silvered and lacquered, and attached to movements. Rods are made of steel, with mercury in glass jar. The stirrups for holding the jars are gilded.

PRECISION CLOCKS

We have had in process of construction for several years past a series of clocks in which every feature of design and workmanship has been made subservient to the principal idea of obtaining as high an accuracy in their time-measuring qualities as our present knowledge of physical science and of the horological art will allow. We propose for these the name of "Precision Clocks," using that term in the sense in which it has come to be understood in modern science as indicating a time-measuring instrument entirely above the line of commercial accuracy, and intended for those who desire for purposes of scientific work, or for watch and chronometer rating, or

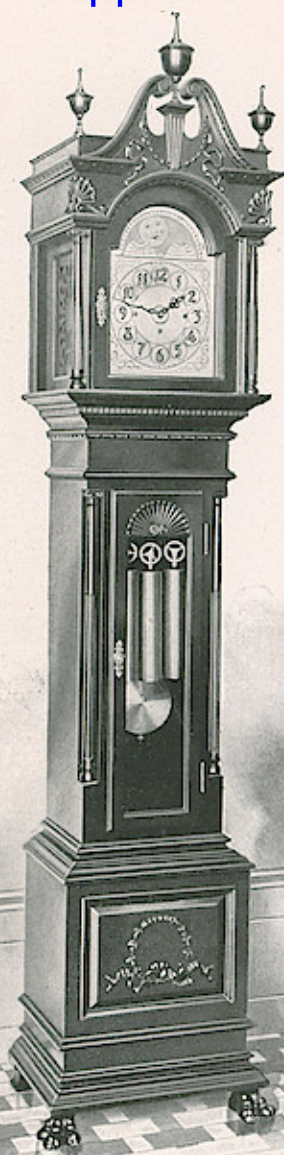

as a standard timepiece for local reference, to have a clock of extreme precision.

The plan of mounting astronomical instruments, where great rigidity and permanence is required, has been adopted in the mounting of the cases and pendulums of these clocks. A very heavy cast-iron frame, resting upon three leveling screws, and in which the strain of its weight can be eased by two additional setting screws, receives a solid triangular casting, which supports the delicate suspension springs from which the pendulum swings.

In order that the weights may fall entirely outside of the case and yet be free from any interruption and still maintain the closeness of the case, two polished brass tubes with their lower ends closed are secured by heavy flanges to the top plate of the heavy iron case and open into the glass head-piece of the case, and into these tubes the weights pass as they fall to the bottom of the case. In the gravity escapement used in these Precision Clocks, about one-quarter of the weight which has been found necessary for previous gravity escapements is used; and with such weights the clock is designed to run eight days with one winding. In case of the dead beat escapement the clock runs thirty-two days with one winding.

The pendulum is made exceptionally heavy, with mercurial compensation, and for rendering its arc of vibration a delicate vernier adjustment is provided at about the middle of its length.

In mounting the clock it is preferable to build a pier to a level of one foot or more above the level of the floor, and cap it with marble or stone as the purchaser may desire. It is then merely necessary to set the clock case upon its adjusting screws on the top of the stone pier.

SETH THOMAS HALL CLOCK MOVEMENTS

No. 72 A

Eight Day, Weight, strikes hours and half hours on a 6 inch Cathedral Bell. Has Damaskeened Plates, Lantern Pinions, Graham Escapement and Maintaining Power.

No. 72 B and No. 72 C

Same as No. 72 A, but arranged for Moon Phases. "B" and "C" differ only as to arrangement for size of dial used.

No. 74 C

Eight Day, Weight, Quarter Strike, Westminster Chimes. The Chimes are struck on four Cup Bells; the hours on a 6 inch Cathedral Bell. Has Damaskeened Plates, Lantern Pinions, Graham Escapement and Maintaining Power.

No. 74 B and No. 74 D

Same as No. 74 C, but arranged for Moon Phases. "B" and "D" differ only as to arrangement for size of dials used.

No. 84

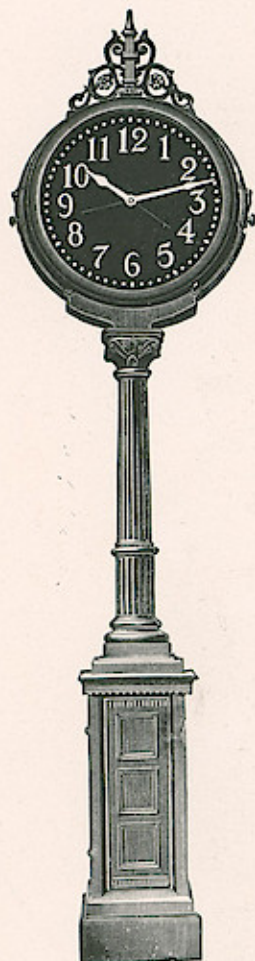

Eight Day, Weight, Quarter Strike, Westminster Chimes. The Chimes are struck on four Cathedral Bells; the hours on a large Cathedral Bell. Can be made silent or chime at will. Has Damaskeened Plates, Cut Steel Pinions, tempered, finely finished throughout, Graham Escapement and Maintaining Power. The rod is of soft steel. This movement is equal in every detail to the finest of foreign makes.

HALL CLOCKS

It is inconvenient to keep on hand, ready for shipment, a full assortment of our Hall Clocks, but we aim to carry stocks of movements, dials and casts. Ten days' notice ought, therefore, to be given for fitting and testing.

TOWER CLOCKS AND POST CLOCKS,

Containing full information, will be sent on application.

**TWO DIAL
POST CLOCK**

With Iron Column and Iron Head. 40 inch Dials. Height, 13 feet 10 inches. We make Post Clocks in Three Sizes: A Two Dial Clock having 30 inch Dials, a Two Dial Clock having 40 inch Dials, and a Four Dial Clock having 36 inch Dials. Write for Special Post Clock Circular if interested.

THESE Clocks are unsurpassed in quality of material and workmanship, and in accuracy of time-keeping. They are constructed upon the rules of the highest authorities in horology. They have hardened Cast Steel Pinions, Cut Gearing, and all wheels are made of Bronze, except the main striking wheels.

Our Tower Clocks have received the highest Premiums and Awards at the Fairs of the American Institute, New York, the National Centennial Exhibition, Philadelphia, 1876, the Paris Exposition Universelle, 1878, and the World's Industrial and Cotton Centennial Exposition, New Orleans, 1884-5. At Paris they competed with clocks from the most celebrated makers in Europe.

The hundreds that have been running for many years in all sections of the country have given uniform satisfaction. Some of them, that have been closely observed, have made remarkable records as accurate time-keepers, as will be seen by reference to reports of parties observing them, printed in our Tower Clock Catalogue, which will be sent on application.

Of Jewelers, Architects and Builders, we ask an opportunity to make estimates for Tower Clocks and Regulators, and suggest that in making plans for buildings provisions be made for Tower Clocks.

In writing for prices and information please state the size and number of Dials required, the weight of the Bell, and the interior dimensions of the Tower. We will quote price for a suitable Clock, including Hands and Figures (black or gilt) adapted to Dials of any diameter desired.

At the Centennial Exposition, Philadelphia, the Seth Thomas Clock Co., of Thomaston, Conn., were given the AWARD for "Tower Clocks and Clocks of Commerce."

AWARD.

For a large Tower Clock, with Dennison's double three-legged gravity escapement. The pendulum has a zinc and steel compensation. The weight of the pendulum ball is 500 lbs., of the rod 200 lbs.

There is provision against accident from the breaking of the pendulum springs. The driving weight of this clock is 200 lbs.

The whole construction of the train is good, and the action of the escapement is all that can be desired, since an increase in the power applied to the train does not appear to disturb sensibly the arc of vibration of the pendulum. Also for the manufacture of Brass Clocks in great variety for general use and of good quality in relation to their prices, and for Ornamental Clocks.
